This table presents HIV infection cases using the year the person was first diagnosed with HIV

The term HIV infection is used to refer to three categories of diagnoses collectively:

- (1) persons with a diagnosis of HIV infection (not AIDS)
- (2) a diagnosis of HIV infection and a later diagnosis of AIDS
- (3) concurrent diagnoses of HIV and AIDS

Rate per 100,000 population based on corresponding years' State-level Bridged Race Estimate

Rates based on reported numbers less than 12 should be interpreted with caution because the numbers have underlying relative standard errors greater than 30% and are considered unreliable
