

Find Bid Data

AASHTOWare Project Role User Guide

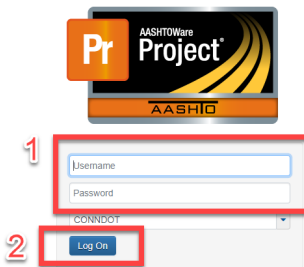

The **Find Bid Data** screen enables the user to gather bid data from proposals stored in the system and determine an average bid price based upon selected parameters. The average bid price is calculated as the sum of all bid prices divided by the number of bidders. Find historical data for different items by entering a new value in the **Bid Item** field or search criteria in the **Main** quick find search box. The Bid item field provides specific search results, while the main search field provides general results based upon the entered criteria. The Drop down filter function can also be to narrow search further by time, quantity and work type.
