1. Report No. CT-170-1884- 01-03-12	2. Government Accession No.	3. Recipients Catalog No.	
4. Title and Subtitle CTTransit Demonstration and Evaluation of Hybrid Diesel Electric Transit Buses - Interim Report 1		5. Report Date September 2003	6. Performing Organization Code
7. Author(s) Stephen W. Warren		8. Performing Organization Report No.	
9. Performing Organization Name and Address CTTransit 100 Leibert Road Hartford, CT 06141		10. Work Unit No. (TRIS)	11. Contract or Grant No. CM-005984
12. Sponsoring Agency Name and Address Connecticut Department of Transportation 2800 Berlin Turnpike Newington, CT 06131-7546		13. Type of Report and Period Covered Quarterly Interim July, August, September 2003	14. Sponsoring Agency Code 170-1884
15. Supplementary Notes This project is being funded by a Congestion Mitigation Air Quality grant (CM-005984). The project partners are: CTTransit, Allison Transmission, Horiba Instruments, Inc., New Flyer Bus Industries, University of Connecticut, ConnDOT Bureau of Public Transportation, ConnDOT Division of Research, The East Coast Hybrid Consortium, and the Connecticut Academy of Science and Engineering.			
16. Abstract The project goal is to identify the next generation of transit vehicles for future fleet replacement that are cost effective, reliable, produce fewer emissions, and have improved fuel economy compared to the standard heavy-duty diesel powered bus. Data are being collected to produce an estimated life-cycle cost analysis, using emissions information, mileage, fuel economy, power production, brake pad wear, maintenance and repair costs. Bus operator surveys are also being performed. Two 2003 model year 40 ft low floor New Flyer Allison hybrid diesel electric buses were placed into service in June 2003. Performance data collection began on July 1, 2003 on these buses as well as two virtually identical 2002 model year 40 ft low floor New Flyer standard diesel buses. The hybrids and base buses operate in virtually identical conditions on equivalent routes each day.			
17. Key Words Hybrid diesel electric, fuel economy, bus performance		18. Distribution Statement No restrictions. This document is available to the public through the National Technical Information Service, Springfield, VA 22161	
19. Security Classif. (Of this report) Unclassified	20. Security Classif.(Of this page) Unclassified	21. No. of Pages 26	20. Price

- Closed Work Order Costs By Asset
 - H301
 - H302
- **CTTRANSIT Hybrid Bus Trouble Codes**

This project was sponsored by the Connecticut Department of Transportation in Cooperation with the U.S. Department of Transportation, Federal Highway Administration. The contents of this report reflect the views of the author who is responsible for the facts and accuracy of the data presented. The contents do not necessarily reflect the views or policies of the Connecticut Department of Transportation or the U.S. Department of Transportation, Federal Highway Administration. This report does not constitute a standard, specification, or regulation. This is an interim report for this project and the reader should be cautioned that the data has not yet been fully analyzed.

**First Quarter
CTTRANSIT
Demonstration and Evaluation of
Hybrid Diesel Electric Transit Buses
Summary of Activities and Findings**

- Two 2003 model year 40' low floor New Flyer Allison hybrid diesel electric buses were placed into revenue service in mid-June. Performance data collection began on July 1st on these buses as well as two virtually identical 2002 model year 40' low floor New Flyer standard diesel buses.
- The test buses were randomly assigned to operate on every route in the system in order to test their capability and versatility in different operating conditions. These routes vary in passenger loads, operating speed and terrain. In order to make the test data as comparable as possible a standard base diesel bus was assigned to "shadow" a hybrid bus on following trips each day. The hybrids and base buses therefore should operate in virtually identical conditions each day.
- Performance data collected included route and driver assigned, noon temperature and weather, miles operated, fuel and oil consumed, road calls, trouble codes, maintenance performed and cost of maintenance and repair.
- To date the new hybrid buses have operated exceptionally well. They have been popular with our customers and our Bus Operators. Formal surveys of each of these groups is scheduled to take place after six months of vehicle operation.
- During the first quarter the hybrids demonstrated better reliability and lower maintenance costs than both the standard fleet average and the standard diesel base comparison buses. In September the hybrids had 12% better fuel economy than their comparison base buses and 34% better fuel economy than the CTTRANSIT overall fleet average.
- The emissions testing component of the test program will begin in the next quarter. Due to inertia programming issues with the CTTRANSIT chassis dynamometer and the recent market introduction of new mobile emissions measuring equipment, the test protocol was revised to a real world real time in-vehicle evaluation program. The EPA is promoting this test design and it makes our project even more interesting, unique and ground breaking.
- Horiba Instruments Inc. was added as a program partner. They expedited the change from their laboratory fixed gas emissions equipment to their brand new state of the art mobile unit. They also provided us with a reduced cost for the equipment in order to be able to participate in our special project.
- The new Horiba emissions equipment was delivered at the end of September. Setup and training is scheduled for mid-October.
- A significant amount of work was undertaken in September in designing how all the equipment would be positioned and secured in the bus. Cardboard boxes were constructed in identical sizes to the equipment components. They were utilized to determine the best location for each piece of equipment.
- Special fittings were ordered that will be required to connect to the exhaust pipe in order to collect emission gases and particulate matter quantity and particle size. Mobile carts with vibration dampers were constructed to hold various pieces of test equipment.
- A stand alone electrical generator will be purchased in order to power all the test equipment without affecting the bus. It will be positioned along with an air compressor on a small trailer which will be towed by the bus. The small rolling resistance of the trailer will be factored into the data analysis.

The system was checked and rest at the garage. A road test by a Technician noted a momentary loss of power on a 4.5 - 5 degree ramp @ 35mph. System reset on own and the problem cleared and could not be replicated. Bus was returned to service operating OK.
09/09/03	All clear	All clear	Follow-up check
09/15/2003 AM	All clear	All clear	Follow-up check
09/15/2003 PM	D1=8002 = High Voltage Discharge Fault D2=7391 = Inverter B Isolation Fault-Shutdown D3=7491 = Inverter A Isolation Fault-Shutdown D4=7390 = Inverter A Isolation Fault-Caution D5=7490 = Inverter B Isolation Fault-Caution		System failed light on the dash this afternoon. The following codes were logged in the transmission keypad. The bus was driven back under its own power, but the dash switched was cycled numerous times. The road call mechanic did not detect any fault, defect or reduced power situation.

CTTRANSIT Hybrid Bus Trouble Codes

09/25/03	All clear	D1=6634= Can Link lost with eng. Controller, long time out	These codes had no adverse affect on the bus operation
		D2=2312=Push Button Shift Selector
