[1]The cumulative number of residents with confirmed COVID-19 obtained from data reported by individual nursing homes to the Connecticut Department of Public Health Facility Licensing & Investigations Section via a web-based COVID-19 daily reporting system.

[2]The cumulative number of deaths among nursing home residents is based upon data reported by the Office of the Chief Medical Examiner. For public health surveillance, COVID-19-associated deaths include persons who tested positive for COVID-19 around the time of death (laboratory-confirmed) and persons whose death certificate lists COVID-19 disease as a cause of death or a significant condition contributing to death (probable).

[3]Point Prevalence Survey (PPS) is a strategy in which the infection status of all residents in a facility can be determined so that people who are potentially infectious can be separated from other residents in the facility. The nursing home PPS initiative began in early May. The PPS initiative was designed to help contain outbreaks, and not to establish the burden of COVID-19 in nursing homes. Differences in survey timing will impact the number of positive results that a nursing home reports.
