HIE/PDMP Environmental Scan Update

Pete Robinson, CedarBridge Group

Use Cases for Medication Data

For Discussion: Other Priority Use Cases?

Medication History

Value is greatest when medication history/reconciliation functionality is integrated seamlessly into EHR workflows

Data timeliness, completeness, structure/ontologies may be preconditions.

Chronic Disease Management & Medication Therapy Management (MTM)

Medication data associated with chronic care management and medication management therapy is required for Medicare compliance

Population Health

Data normalization are necessary for effective analytics

Timeliness of data availability (i.e. near real-time) is less important than it is for other use cases

OHS
