

PCRRWG Learning Health Network and Subgroups Framework

Goal:

To review practice transformation elements that have been supported by new payment reform models with the Primary Care and Related Reforms Work Group (PCRRWG) to inform development of the Primary Care Transformation Roadmap (Roadmap).

Framework:

- Level set understanding of the Primary Care Modernization (PCM) and Health Enhancement Communities (HEC) recommendations, including a high-level summary of practice transformation and community health models being supported by payment reform efforts that were reviewed during the State Innovation Model (SIM) processes.
- Identify new efforts to support practice transformation through payment reform for the PCRRWG to review and discuss, including how the development and/or implementation of these models were influenced by the pandemic.
- Select models that different stakeholders would be interested in.
- Identify speakers to present and discuss the new models.
- Capture issues and ideas that can inform the development of the Roadmap and align stakeholders behind implementation concepts.

Discussion:

1. Review/revise the Learning Health Network (LHN) framework
2. Identify the Subgroups
3. Subgroups review new models and bring promising practices back to the PCRRWG for discussion

Potential Subgroups for Consideration:

- Models focused on population health and health equity
- Pediatric models
- Behavioral health integration models
- Consumer focused/led models
- Data-informed coordination and health information exchange
- Models focused on vulnerable populations and safety net clinics
- Payer led practice transformation models
